PremiseONe
by mpac

Turn property data into intelligent decisions.

EVERY. SINGLE. PROPERTY.

PremiseONe by MPAC brings structured property and location intelligence together to help organizations better understand their markets, identify opportunities and plan with confidence.

Three customer benefits

- Understand what is where
- Enrich existing customer and operational data
- Support smarter planning and investment decisions

Available intelligence

Property and location information that can add valuable context to existing business data.

Flexible delivery

API and bulk-data options designed to support existing systems and workflows.

Practical applications

Property intelligence that can support infrastructure, network, location and operational planning.

Why MPAC?

Built on MPAC's property information and expertise, PremiseONe gives organizations a trusted foundation for planning, analysis and more informed business decisions.

PremiseONe
by mpac

Available intelligence

Depending on business needs and availability, PremiseONe by MPAC can bring together:

- Property identifiers and address intelligence
- Geographic and municipal boundaries
- Property classifications and household information
- Additional property attributes based on business needs

Flexible delivery

PremiseONe by MPAC can support different organizational and technical requirements through:

- Available API access
- Scheduled bulk-data extracts
- Data enrichment that adds property context to existing customer and operational information

Practical applications

Utilities

Support service-territory analysis, infrastructure planning and customer-data enrichment.

Telecommunications

Strengthen market analysis, coverage planning and decisions about network expansion.

Logistics

Support location analysis, delivery-territory planning and operational decision-making.
